

Know the *Truth* about Amendment 2

Potential Exploitation of Women

Amendment 2 will **deceive** women into giving their eggs for experimentation with the promise of payment. It will treat women and their eggs as a raw material and commodity for the bio-tech industry and will put vulnerable women at risk of serious complications including death. Worse yet, women would have no legal right to seek compensation for injuries, complication or even death.

- To treat just one group of patients, America's 17 million diabetics, with possible embryonic stem cell therapies would require at least 800 million eggs from 80 million women of child bearing age. The only means of collecting this many eggs would be a procedure known as ovarian hyper-stimulation.
- Ovarian hyper-stimulation can have serious health consequences. Risks include strokes, infertility, organ failure and **DEATH**. Up to 35% of women who submit to ovarian stimulation experience health consequences.
- "As long as profit depends on women's bodies, we can be sure that the most vulnerable women will be aggressively pursued regardless of the risk to their health and happiness. In the name of science, the industry will literally have its hands inside the bodies of hundreds of millions of poor, disadvantaged women." (Family Research Council Director of Life and Women's Issues, Pia de Solenni, PhD).

Amendment 2 is **deceptive** in that it will treat **WOMEN AS COMMODITIES**, subject them to life treating procedures and target the most poor, disadvantages and desperate women.
